

COMPANY PROFILE

SOURCE Co., established in 1998, is proud to say that our works have been showering with diversity. I.T. Consulting & Services is one of our core businesses. Our division teams are committed to utilize our specialty in I.T. knowledge and hands on experience to leverage corporate comparative advantages for our clients with a view to maximizing efficiency and streamlining workflows. Apart from that, we also diversify our solutions to fit requirements of various industries.

Providing comprehensive I.T. services for our clients allows SOURCE to develop highly customized solutions. This competitive advantage enables us to make every service-end a customized but diversified one. At the same time, our clients can benefit from fewer search and related costs in our One-Stop package. Our staff is always on our mark to deliver the best and quality service to assure satisfaction from our clients. It is also our service pledge.

Vision

To create a valuable Internet business leader and to be a technology source by utilizing the most optimum resources.

Mission

- Provides the best products and services to customers.
- Create a win-win relationship with customers.
- Encourage to use open source products and platform to provide cost-effective solution.
- Support and develop the new information technology to contribute to the society.

Core Value

- Team Spirit
- Respect And Trust Each Other
- Staff Is The Most Important Asset
- Commitment

Web Services & eSolution

One of SOURCE's dominant assets is her people, especially those in IT and Design divisions. Professionals in these divisions are equipped with expertise in software and web design knowledge.

Our IT and Design teams are proficient in:

- eCommerce with security enhancements
- mCommerce & WAP Solutions
- ASP Solutions
- Web Hosting Solutions
- Multimedia Web Design with animation effects
- Broadband connection & Server co-location
- B2B (Business to Business) & B2C (Business to Customer)

Knowing well that web development will penetrate into daily businesses more and more in the future, a great deal of opportunities can be leveraged from this trend. Thus, many web instruments that enable enterprises to establish their online entities emerge.

Looking close to these changes and demands, our Web Services people work our best on screening for the web instrument most favourable for your company. In other words, instruments selected will create the highest value for the company while maintaining the requirements of cost-effectiveness and suitability.

Digital Communications Services

Communications is essential to every company, both internal and external speaking. How information is transferred inter-department or between clients? Smooth? Efficient? Secured? . Knowing that ERP is one of the hottest topics in the business world nowadays, SOURCE offers a series of software applications for streamlining operations and efficient resource allocation. Focusing on this point, we position our Enterprise Resources Planning (ERP) software as the highlight product in our Software Development.

Fundamentals

- Developed in accordance to business workflow progression provides users a familiar system environment and a high degree of flexibility to move according to their own.
- Available in Chinese (Traditional and Simplified) and English versions. Instant language switching function can fit different users in a multi-national company.
- Support multi-currency, -company and -database enables a company to develop multi-dimensional information structure
- Security Authorization function allows login authorization customisation to different user levels.

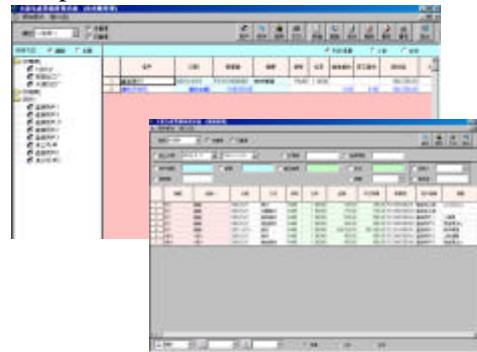

Production and Inventory Management

- Equipped with easy-to-use Bill of Materials (BOM) reports streamlines production.
- Pre-designed inventory reports allow management and end-users to have a comprehensive view of the stock status from various angles.
- Systematic production processing and approval makes every part, batch and material highly traceable and controllable.

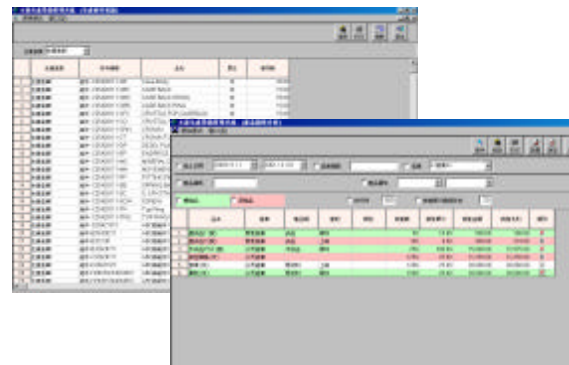

Billing and AR/AP Management

- -Customization in fields and bill printout design allows a high flexibility
- -Comprehensive Criteria Search allows users to spot documents in the shortest time
- -AR/AP management generates reports and statistics figures revealing the payment collection situation of different parties in various intervals.

Reports and Statistics

- Besides general business reports, reports revealing Product Sales performance, Best-Selling Items and the like are also available.

Others

- Human Resources Management, Planning & Budgeting, Remote Access functions and other functions are added as per client requests.

Web Page Design

Homepage is getting more and more indispensable in corporations. Besides being an interactive interface for outsiders to know more about the company, webpage is also an effective means to promote new product and information.

Shopping Cart: One of our eCommerce product highlights. This eCommerce facility enables your clients to get a virtual shopping experience letting them enjoy a great deal of fun and technology in their shopping.

Hosting: Security and Accessibility are essential to webpages, especially those of business nature. SOURCE provides hosting services with all these elements guaranteed. We offer secured firewalls to protect your valuable information against unwelcome sources, and comprehensive backup services are implemented.

ASP solutions: Emailing, Web Administration, Database Management are three of the main ASP solutions offered by SOURCE. Many packaged and customized solutions are ready to fit different needs and enterprise size.

Other solutions: Web Mail Services, online registration system, guest book system, bulletin board system, chat room system, voting & survey system, mailing list system, news publication system, online calendar system, online bookmark system, online FAQ system, advertisement banner rotation system, web site hit rate statistics system as well as system monitoring system.

Multimedia Services

Our multimedia team provides the greatest variety of services to our clients. Broadcasting, Games, eCatalogue are three of the most outstanding projects of the team.

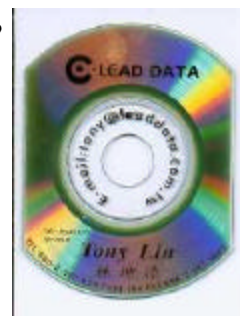

Broadcasting: Broadband audio and video streaming is ideal for interactive entertainment, e-commerce, corporate, distance learning, and financial market activities. The technology allows enterprises or individual broadcasters, filmmakers and educators to deliver DVD quality video and CD quality audio directly to end-users through Mbone, Streaming technologies and the like.

The architecture has been optimised for content broadcasting, web delivery, and video-on-demand, while providing the essential infrastructure for tracking, billing and managing all transactions.

Utilization of video on the Internet is as easy as sending an email. Corporate communication, training, seminars, website enhancement or marketing messages are simply a mouse click away.

Games: SOURCE has acquired a think tank of game technologies and ideas. Great idea and great presentations allow Game projects to be one of the cores of our Multimedia team. Our team is equipped with professionals who are proficient in Flash, Shockwave, Java, DirectX, VB and other game programming tools.

eCatalogue: Getting exhausted to carry a heavy product catalogue? A better idea to utilize eCatalogue in which product details can be accessed anytime and anywhere in an interactive way drawing much of you clients attention!! Using this Economized, Convenient and Effective way to store your essential corporate information can out compete your competitors:

Unified Messaging convergence of voice, fax, data and Internet

We live and work in a world rich in communications media - Mobile phones, answering machines, voice mail, e-mail, pagers, fax, . . .the list seems endless.

Whether you are a service provider looking to deliver a high-quality unified messaging service, or an enterprise looking to make life easy for your employees, our unified messaging solution can help you make the diversity work to your advantage. It provides a central service that coordinates and provides access to popular communications formats through the interface that is most appropriate at the time. It promises a new era of collaboration and communications.

VoIP

Imagine making use of your existing data network to make telephone or fax call for the communication amongst your Hong Kong, China and other branch offices. Imagine the cost of IDD is the same as the cost of sending an email? It is not a dream anymore.

Voice over IP connects the telephone system and the IP network allowing companies to digitize, compress and route intra-company voice and fax traffic over the enterprise IP networks or even using Virtual Private Network (VPN) to leverage on the cost-free Internet.

Benefits:

- Reducing number of required lines for voice and fax traffic, reducing communication and administration costs.
- Enabling flexible connectivity and extending PABX functionality to remote workers.

With the vision of voice over data will be the future trend, we cooperate with NxNetworks Corporation (NASDAQ: NTRX), a leader in voice over packet technology, to deliver solution of multi-service networks for the transport of voice and data. Our solution can cater for different kinds of data networks such as IP, Frame Relay and public Internet.

IVRS, Fax -on-demand and E-survey

Interactive Voice Response System can help you to answer customer calls and performing authentication to identify your customer and also his profile. Then, the system can provide necessary information. The value is reducing cost, 24 hours services and increase the interaction with customers

By making use of the outbound function, E-survey can be automated. Survey calls will automatically dial to the calling numbers which are specified in a database. Simple questions are asked and feedback are collected. Results are automatically analyzed and generated different reports.

During customer interaction, it would be necessary to reply with tables or figures, this is where a Fax on demand can help. Your customers or callers only needed to input their fax number, the required facsimile will be faxed to them instantly. The beauty also comes from the systematic management of information storing in the system.

I.T. C.V.

Our I.T. human resources, being one of the most important resources of the division, consist of a variety of experts from different I.T. fields. We have specialists from Software applications, Hardware development & maintenance and core components of I.T. field.

We have a group of experienced and technical consultants. Some of them got their Master Degree in Software Technology and most of them got their Bachebr Degree in Computing from reputable universities in Hong Kong. Besides, they have the following professional qualifications:

- Microsoft Certified Software Engineer (MCSE)
- Certified Novell Engineer (CNE)
